

# OxTech FUOTA Portal

The OxTech FUOTA Portal is an innovative tool, meticulously crafted to facilitate Firmware Updates over the Air (FUOTA). Its primary purpose is to streamline the intricacies of wireless fleet management, enhancing operational efficiency and minimizing time and cost expenditures.

Seamless

Convenient

Scalable

## Ease of Use

A user-friendly interface guides users through the FUOTA process effortlessly

## Flexible Options

Eliminates the need for complex manual device additions and support individual or batch updates

## Compatibility

Seamlessly integrate with diverse LNS options ensuring compatibility and FUOTA benefits regardless of chosen LNS

## Efficient Scheduling

Schedule updates at a suitable time across various locations, clusters, or device groups enhancing efficiency and minimizing disruptions

## Status Monitoring

Receive real-time status updates of FUOTA updates eliminating guesswork and enhancing the overall deployment experience

Enables FUOTA for LoRaWAN Solutions

Compatible with multiple LoRa Network Servers (AWS, Senet, TTI/TTN & more)

Customizable Updates

Intuitive User Interface
